"More Power, More Freedom!"
Newsletter #12, Sep. 2022

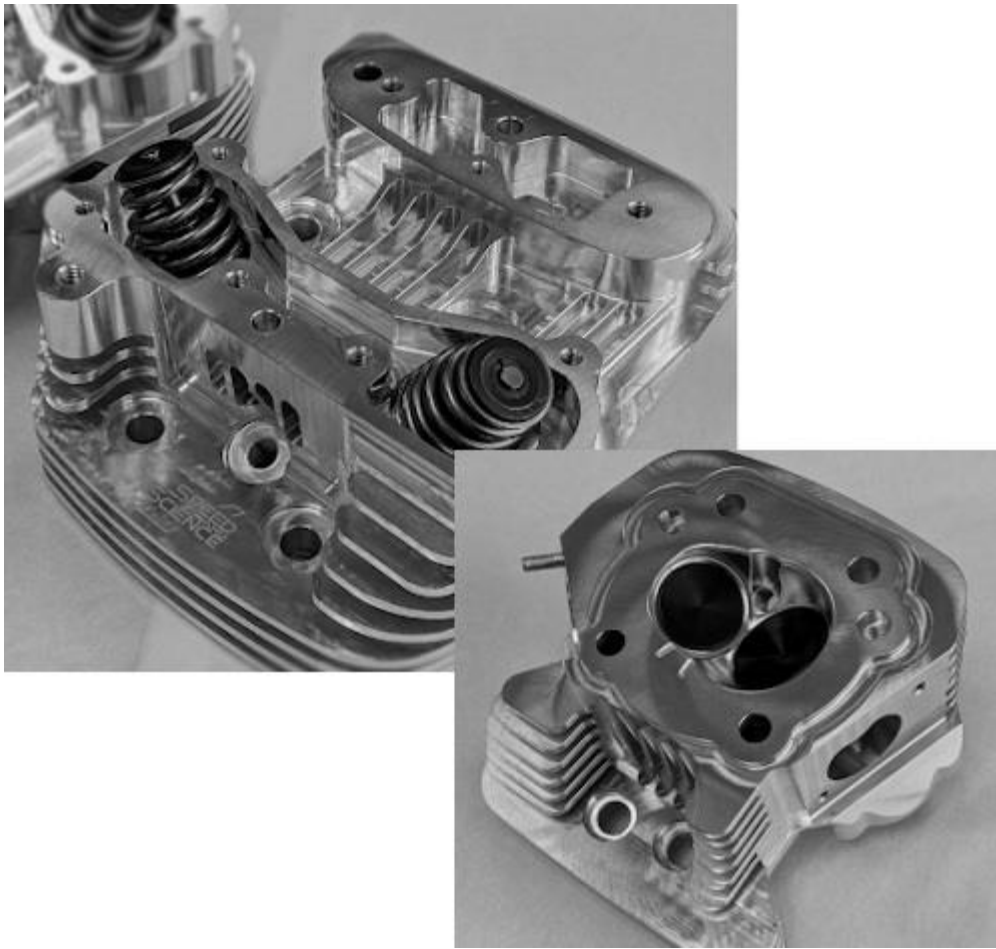

*****NEW PRODUCT RELEASE*****

In our last Newsletter (June '22) we've included some teaser screenshots of our new EVO headset. Fast forward to today: we're proud to announce that our product line now includes the [billet aluminum heads for the H-D EVOLUTION engines!](#)

Just to re-cap: we've completely redesigned the combustion chamber (70.5CC now) for an outstanding flamefront propagation, and connected it with the outside world via super-efficient, fast ports. More cooling area (especially on top), so all the extra power can be easily handled. No need to machine your heads for tall camshafts anymore, that's already taken care of. 7MM valve stems for less flow obstruction, hi-tensile beehive springs. And the list goes on.

So, what does it do, you may ask? Well, our test bike (80CUI, '96 DYNA) clocked 90+HP @ 6,000RPM. And that's with a relatively mild setup and on pump gas. Stock cylinders and flat-top pistons. Simply outstanding!!

Right now we're working very hard to fulfil all the pre-orders (thanks!!!!). Those should start shipping by the end of September, then we'll try our best to keep stock for upcoming orders.

Please visit our website for more details and purchase your own piece of motorcycle jewelry.
